1. Program Identification and Ge0neral Information:

1	**Scientific name of the program:**	Cyber security and digital forensics, B.Sc. (Hons.)
2	**Total credit hours required to award the degree**	140 Credit Hours
3	**Number of years needed for completion of the program:**	4 Years [8 Academic semesters]
4	**The body responsible for granting the degree:**	21 September University of Medical and Applied Sciences
5	**The body responsible for the program:**	**Department** of Cyber security
6	**Award granted on completion of the program:**	**Bachelor of Science in Cyber security and digital forensics**
7	**Study system:**	Regular attendance (Semester based System)
8	**Study Language of the Program:**	English
9	**Entry requirements:**	Secondary School Certificate (Scientific)
10	**Departments participating in the program:**	Department of Information Technology
11	**Starting year of the program:**	2025/2026
12	**Study methods in the program:**	Full time
13	**Location of Delivery:**	Faculty of Medical Technology 21 UMAS University Campus
14	**The program resources:**	21 September University of Medical and Applied Sciences
15	**Minimum grade requirements:**	Following the Admission Rules made by Ministry of Higher Education and Scientific Research- Republic of Yemen.
16	**Other admission requirements:**	21 UMAS Admission and Regulations Rules.
17	**Date of current development of the program:**	Mar 2025
18	**Prepared by:**	1. Dr. Abdulrahman Mohemmed Obaid 2. Dr. Jameel Saad Hamzah 3. Dr. Awadh Ali Abdo Mohammed
19	**Program coordinator:**	Dr. Hamzah Ali AbdulRahman Qasem

4. Introduction:

The Bachelor's Program in Cyber security and digital forensics is designed to qualify human cadres

with the aim of deterring such cyber attacks and protecting cyberspace. This program focuses on teaching basic and advanced knowledge in prevention, detection, response, and recovery from incidents and cyber attacks. Using an interdisciplinary approach, the program aims to provide students with a broad analytical framework for assessing and solving cybersecurity problems.

The skills you'll gain on this course will be in high demand in tomorrow's world. The cyber security sector is facing a significant skills gap at a time when threats and the legal and commercial consequences of inadequate security are increasing. Emerging areas such as the Internet of Things and Smart Cities offer new opportunities for us all, but also new vulnerabilities to accidental or malicious actions.

Cyber security and digital forensics is a computing-based discipline involving technology, people, information, and processes to enable assured operations in the context of adversaries. It draws from the foundational fields of information security and information assurance; and began with more narrowly focused field of computer security.

Promising Jobs:

1- Security engineer
2- Secure system architect
3- Security consultant
4- Security research assistant
5- Data recovery expert
6- Ethical hacker/penetration tester
7- Forensic investigator and consultant
8- Network administrator

5. University Vision, Mission, Values, Objectives, and Goals:

University Vision:

A Contemporary University with National Responsibility and Faith Identity.

University Mission:

Leadership of transformation in managing and providing the health care with all partners via having the distinction standard in education and applied and medical researches that meet the needs of Yemeni people and regional influence.

University Core values:

- Leadership and Influence
- Excellence and Innovation
- Work effectively with a time

University Goals:

1- Ensuring the application of quality standards and having the distinction standards in medical and applied sciences, scientific research and community service.

2- Adopting student-centered learning, the partnership with them for life, consolidating the principles of national responsibility and faith identity, looking after them and developing their capabilities after graduation and during work.

3- Attracting and Eemploying scientists, cadres and talents to gain minds and put an end for the “brain drain” in a way that promotes and ensures the availability of thinkers, businessmen and good citizens.

4- Developing the distinguished academic infrastructure continuously and establishing modern research and service centers with high efficiency that can give a real effect locally and regionally.

5- Enhancing the university status as a preferred partner for local, regional and international partnership through implementing creative styles of education, exchanging researches and knowledge, and providing real and effective outcomes for developing professional practices to benefit from them locally and regionally.

6. Faculty Vision, Mission, Values, and Objectives:

Faculty Vision:

A contemporary medical technology faculty with sober academic dimensions, national responsibility and faith identity.

Faculty Mission:

Participation in leading the medical technological transformation to provide technically and informatically integrated health care, through the provision of scientific educational programs with solid and contemporary academic dimensions, and research services of a creative nature that meet the needs of the Yemeni health sector, its specificity and regional needs.

Faculty Values:

- Forefronting
- Pioneering
- Sobriety

Faculty Objectives:

1- Applying Total Quality Standards, and setting an academic excellence in medical technology sciences, scientific research and community service.

2- Centrality of students in the educational process, their participation, as well as, looking after them, establishing originality values and developing their potential after graduation and during work.

3- Attracting highly scholars cadres, and highly specialized talents in medical technology thus enhances and ensures that there are thinkers, businessmen, and good citizens.

4- Harnessing all available capabilities of infrastructure, academic, training centers, as well as, modern researches and service centers and available educational laboratories to achieve the desired goals of the college of medical technology in order to meet the needs of the labor market.

5- Enhance the university and college position as an ideal partner for the academic and health sectors at the local, regional and international levels by providing educational programs for developing professional practices and useful health-care services.

7. Department Vision, Mission, and Objectives :

Department Vision:

To provide innovative cybersecurity and digital forensics solutions with academic excellence, national responsibility, and faith-driven values.

Department Mission:

To lead in cybersecurity and digital forensics by providing cutting-edge education, fostering research, and offering innovative solutions that meet the evolving needs of the Yemeni digital sector and the region.

Department Objectives:

1- Implementing quality standards in cybersecurity and digital forensics education, research, and community service.
2- Adopting student-centered learning, nurturing national responsibility, and enhancing students' skills post-graduation.
3- Attracting skilled professionals to reduce brain drain, fostering innovation and national development in the cybersecurity sector.
4- Continuously developing state-of-the-art academic and research infrastructure, ensuring real-world impact locally and regionally.
5- Strengthening the department's role as a key partner in local, regional, and international collaborations, offering cutting-edge cybersecurity and digital forensics education and research to meet market needs.

8. CyberSecurity Program Mission and Objectives:

Program Mission:

To equip students with the knowledge and skills necessary to drive digital security advancements, supporting digital transformation through applied education and research that aligns with the technological needs of Yemen and the region.

Program Objectives:

PEO1. Achieving academic excellence in cybersecurity and digital forensics through quality standards, research, and service.

PEO2. Engaging students in the learning process, fostering national responsibility, and supporting their professional growth.

PEO3. Attracting highly qualified faculty and experts in cybersecurity to enhance the program and meet national and regional needs.

PEO4. Leveraging modern infrastructure, research centers, and training facilities to provide practical and relevant cybersecurity education.

PEO5. Strengthening the program's role in advancing professional practices and offering impactful solutions to the cybersecurity challenges faced locally and regionally.

Annex- 1, Survey on the Strategic Orientations of the Department and Similar Departments, and their Alignment to the Strategic Orientations of the University and Faculty.

9. Program Standards & Benchmarks:

Academic Standards:

1. Since, there are no specific advance standards such as (ACM, IEEE or ABET) for cybersecurity program. Therefore, some points have been taken from NARS for computing, Yemen, First Edition, Council for Accreditation & Quality Assurance, Yemen, May 2018, such as for graduate attributes and teaching strategies because of some similarities

Governmental Rules and Regulations:

1. Act No. 13/2005 of the Law of state universities, higher institutes and colleges, Yemen.
2. The executive regulations of Act No. 13/2005 of the Law of state universities, higher institutes and colleges, Yemen.
3. 21 September University of Medical and Applied Sciences (21 UMAS) Rules and Regulations..

Annex- 2, Academic Standards Curriculum Criteria of Accreditation Board

Annex- 3, Unified Regulations for Student Affairs, Ministry of Higher Education and Scientific Research

Benchmarked Programs*:

1. BSc(Hons.) Cyber security, Depatment of Compter Science, Princess Sumaya University for Technology (PSUT), Jordan

كلية الملك الحسين لعلوم الحوسبة-بكالوريوس الأمن السيبراني

2. BSc, Cyber security, Department of Information Systems, Bahrain University, Bahrain

https://cit.uob.edu.bh/undergraduate/b-sc-in-cybersecurity/

3. BSc(Hons.) Cyber security, School of computing, Plymouth University, UK

https://www.plymouth.ac.uk/courses/undergraduate/bsc-cyber-security

4. BS, Cyber security, School of computer science and mathematics, University of Central Missouri, USA

https://www.ucmo.edu/college-of-health-science-and-technology/school-of-computer-science-and-mathematics/cybersecurity/

5. BSc, Cyber security, Department of Computer Science, Cosmats University, Pakistan

http://ww3.comsats.edu.pk/cs/bscy.aspx

6. BSc, Cyber security, School of Science, Edith Cowan University, Australia

https://www.ecu.edu.au/degrees/courses/bachelor-of-science-cyber-security

* There is no any information found about national program of Cyber security

10. Graduate Attributes:

After successfully completing the program, the graduate should be able to:

1- Apply mathematics foundation, programming fundamentals and cybersecurity knowledge and skills to get solutions of complex discipline-related problems.

2- Identify and analyze Computing problems using computational approaches, methods, tools and techniques.

3- Analyze, design, implement, evaluate, and manage computing-based solutions to computing problems in the context of cybersecurity discipline to meet the users and organizations goals and objectives.

4- Develop and use effective interpersonal skills to work effectively as an individual as well as any other role within the team to perform a required task in variety of professional contexts.

5- Use efficiently project management, leadership, communication, interpersonal relationship and life-long learning skills.

6- Communicate effectively the cyber security concepts within a professional context.

7- Demonstrate commitment to ethical, legal, security, political, and social responsibilities and issues as professionals in cybersecurity practice.

8- Demonstrate interest to commence postgraduate studies in cybersecurity and related fields.

11. Program Intended Learning Outcomes (PILOs):

A. Knowledge and Understanding:

Upon successful completion of the Program, graduates should be able to:

A1. Demonstrate an in-depth knowledge of terminology, concepts, methods, principles and theories relaed to the field of cyber security.

A2. Demonstrate a profound knowledge of computing tools, techniques, and methods for solving computing problems related to cybersecurity.

A3. Identify the user and organizational needs and issues involved in the management and security of digital information and computer technology, and the development and maintenance of secure information system.

A4. Exhibit a sound understanding of the concepts related to analysis and design, implementation and evaluation of secured computer-based systems.

B. Cognitive/ Intellectual Skills:

Upon successful completion of the program, graduates should be able to:

B1. Critically analyze complex computing problems using the basic concepts, principles, analytical and mathematical models, algorithms and software tools in the context of cybersecurity.

B2. Propose appropriate cybersecurity solutions and integrate them effectively into the user and organization environment.

B3. Select an appropriate range of tools and technologies to plan, organize, and implement a cyber security project considering human factors, user and organisational requirements.

B4. Evaluate a computing-based solution to meet a given set of computing requirements in the context of cybersecurity discipline.

C. Practical and Professional Skills:

Upon successful completion of the program, graduates should be able to:

C1. Apply mathematical foundations, algorithmic principles, cryptography, design and development principles, and computing theory in the modeling and design of secured computer-based systems.

C2. Implement and test a computing-based solution to meet a given set of computing requirements in the context of cyber security.

C3. Use effectively cybersecurity standard framework, tools and techniques for the construction, testing and implementation of secure computer applications of varying complexity.

C4. Apply principles, processes, modern tools and techniques to implement and manage a secure information system, mitigating security risks and responding to security incidents.

D. General and Transferable Skills:

Upon successful completion of the program, graduates should be able to:

D1. Function effectively individually, as a member, or leader of a team engaged in activities appropriate to the cybersecurity program's discipline to accomplish a common goal.

D2. Commit to professional ethics, responsibilities, and norms of professional cybersecurity practices.

D3. Communicate effectively in writing and verbally to wide range of audiences in cybersecurity Practices.

D4. Engage in continuing professional development and lifelong learning as a computing professional.

Annex- 4, Survey of Similar Accredited Programs at National and International Universities (Benchmarks))

Annex- 5, Survey on Mission and Objectives of the Program and Similar Accredited Programs and its Alignment to the University, Faculty, and Department Missions and
Annex- 6, Alignment of Program Intended Learning Outcomes (PILOs) to the Faculty Objective
Annex- 8, Alignment of Program Intended Learning Outcomes (PILOS) to Program Objectives (POs)
Annex- 9, Mapping of Program Objectives to the Faculty Mission
Annex- 10, Mapping Program Objectives to the Department Mission
Annex- 11, Mapping of Program Objectives (POs) to the Department Objectives
Annex- 12, Survey of PILOs for Similar Accredited Programs at National and International

Universities.

12. Teaching and Learning Strategies:

- Lectures/ Interactive lectures,
- Tutorials,
- Discussion/Interactive Class Discussions,
- Illustrations,
- Brainstorming,
- Videos Demonstrations,
- Seminar/ Project/ Presentation
- Case studies,
- Exercises and Homeworks,
- Laboratory/Practical Experiments-based Session /Simulations
- Computer Laboratory-based Sessions,
- Workshops Practices,
- Directed Self-Study,
- Problem Based Learning,
- Team work (Cooperative Learning),
- Field Visits/Training,
- Online Activities
- Minor/Major Project

Teaching Strategy	Description
Lectures/ Interactive Lectures	These are lecture/interactive lectures weekly conducted in the class and supported with variety of teaching formats including, lectures and multimedia presentations, use of whiteboard to solve examples and illustrating different tasks and problems introduced by the presentation, and class discussions, in which concepts, approaches, and case studies are presented, explored, and shown students what they need to know.
Problem Solving	This allows students to become more active in their learning as they work out which information they need to find out how to solve a particular problem.
Tutorials	Tutorial classes are provided to create a stimulating environment for students to work through examples, exercises and case studies. Tutorials include worksheets of carefully-designed questions that make students to think about challenging subjects. They are designed to be used after a brief lecture in which students work in pairs or groups.
Seminar/ Project/Presentation	In each course, different projects which cover a variety tasks in the course will be prepared by the teacher and assigned to different student's groups. Moreover, the teacher needs to set advance work for a selected number of

Teaching Strategy	Description
	students, and then have the selected students present their work to the whole group, for discussion, criticism and suggestions for improvement. Seminar sessions and presentations provide an opportunity to address questions, queries and problems.
Team work (Cooperative Learning)	Group learning involves a large or small group activity that encourages students to focus on a topic and contribute to the overall project. Students then learn practically the team work skills such as dividing the tasks, leading or working with team members, planning, sharing knowledge clearly, time scheduling, searching, reporting, presenting, and resources management, etc.
Laboratory/Practical Experiments based Sessions/ Simulations	During laboratory sessions, students will be given experiments to work in groups where they can apply and verify the theories and principles gained. This provides them the opportunity to have hands-on experience to design and conduct experiments in addition to analyzing, interpreting resulted data obtained from experiments, and maximize their learning through actual simulation
Interactive Class Discussions	Interactive class discussions are carried out about some aspects, related to the subject. It involves a large or small group activity that encourages students to focus on a topic and contribute to the free flow of ideas. The teacher may begin a brainstorming session by posing a question or a problem, or by introducing a topic. Students then express possible answers, relevant words and ideas
Directed Self-Study	Students are encouraged to undertake independent study to both supplement and consolidate what are being learned.
Exercises and Home Works	Students are given special tasks, exercises, puzzles, and activities during the class or at homes. Students are exposed to and use many skills throughout this strategy such as developing their way of thinking and solving exercises and puzzles, cognition, and use of different searching strategies.
Field Visits/ Training	The students are assigned to perform a site visit to acquire field related information.
Illustrations	Illustrations performing an activity so that learners can observe how it is done in order to help prepare learner to transfer theory to practical application. Moreover, this strategy involves the teacher showing learners how to do something
Brainstorming	It is a process for generating multiple ideas/options in which judgment is suspended until a maximum number of ideas has been generated. It is a common teaching approach that is often used by organizing a meeting of a group of students in a round circle, so that students combined focus their thinking on solving a problem in creative ways, and this strategy is usually followed in educational meetings and work sessions to stimulate students, their thinking and discussion.

Teaching Strategy	Description
Computer Laboratory-based Sessions	Practical Applications using a variety of simulations software before the real design and implementation. A variety of web-based searches students will be assigned to learn how they can search for solutions using the Web.
Problem based Learning	This allows students to become more active in their learning as they work out to select which information they need to find out how to solve a particular problem. They can work out a problem collaboratively, practice research as well as testing different components to come up with a valid solution.
Online Activities	For every unit covered in each course, students will be given opportunities to complete interactive learning activities including discussion forums, quizzes and problem-solving activities through the e-platform.
Minor/Major Project	Minor projects are usually associated with the practical parts of some courses. Major project is the graduation project in which students will apply the theoretical knowledge and practical skills to formulate a project under a supervision of a faculty member.
Case Studies	To be taken in selected subject to be aware regarding the courses.

13. Assessment Methods:

- Written tests (mid and final terms exam)
- Quizzes
- Oral exams,
- Technical/Practical Report
- Project/Practical Lab Sessions/ simulation
- Assignments
- Practical lab performance assessment,
- Coursework activities assessment,
- Home works and assignments,
- Presentations.
- Problem solving.

Assessment Strategy	Description
Written Tests (Mid and Final Terms Exam)	Mid. term & Final exams for each course is required for all courses except Graduation Projects. These exams will evaluate the extent in which the student understanding of theoretical and applied subjects.
Quizzes	Assigning case studies to students is very helpful to assess the extent of understanding the topics.
Presentations	Some points are assigned to multiple choice questions and Quizzes in

Assessment Strategy	Description
	order to asses' student ability to follow the lecturer during the study course. quizzes are related to past as well as topics discussed in the period. This helps students develop self-confidence, readiness, and accuracy in major exams
Technical/Practical Report/Project/Practical Lab Sessions/ Simulation	Assessing students to their ability to write theoretical and lab reports as well as the understanding of organizing the reports. The practical lab sessions are required for some courses. To demonstrate the report writing skills, the use of IT and E-learning and the skills to interpret and report data and draw conclusions
Practical Lab Performance Assessment	To demonstrate the personal skills, practical expertise, communication skills, ability to interpret and report data and draw conclusions, and team work expertise they are expected to be learned and gained through their education.
Coursework Activities Assessment	The entire assessment of coursework activities during the teaching period of each course (which includes group and individual work, tests and presentations, etc.)
Homeworks and Assignments	Assignments are given to students so that they will have the opportunity to use information provided in textbooks, lecturers, and other resources to test students' degree of understanding in the discussed topic. For all courses except for project.
Problem Solving	This allows students to become more active in their learning as they work out which information they need to find out how to solve a particular problem.
Oral Exams	Used For courses like Graduate Project and Engineering Training to knowing the knowledge of the students.

14. Alignment of Program Intended Learning Outcomes (PILOs) to Teaching Strategies and Assessment Methods:

PILOs	Teaching Strategy	Assessment Methods
Knowledge and Understanding (A1, A2, A3, A4)	Lectures/Interactive Lectures, Tutorials, Illustrations, Videos Demonstrations, Presentation/Seminar, Discussion/Interactive Class discussions, Case Studies, Exercises and Home Works, Directed Self- Study, Online Activities	Written tests (Mid and Final Terms Exam), Quizzes, Oral Exams, Homeworks and Assignments, Presentations
Intellectual Skills (B1, B2, B3, B4)	Lectures/ Interactive Lectures, Tutorials,	Written tests (Mid and Final Terms Exam),

PILOs	Teaching Strategy	Assessment Methods
	Brainstorming, Discussion/Interactive Class discussions Seminar/ Project/ Presentation, Case Studies, Practical Experiments based Session, Exercises and Home Works, Directed Self-study, Problem based Learning, Team work/ Cooperative Learning, Field Visits/Training, Online Activities	Quizzes, Oral Exams, Homeworks and Assignments, Presentations, Technical Report, Practical Lab Performance Assessment, Coursework Activities Assessment,
Professional & practical skills (Cl, C2, C3, C4)	Interactive Lectures, Tutorials, Interactive Class Discussions Seminar/ Project/ Presentation, Case Studies, Practical Experiments-based Session, Exercises and Homeworks, Computer laboratory-based Sessions Directed Self-Study, Problem based Learning, Teamwork/ Cooperative Learning, Field Visits/Training, Mini/Major Project. Online Activities	Written tests (Mid and Final Terms Exam), Quizzes, Oral Exams, Homeworks and Assignments, Presentations, Technical/Practical Report, Project/Practical Lab Sessions, Practical Lab Performance Assessment, Coursework Activities Assessment
General & Transferable Skills (D1, D2, D3, D4)	Directed Self-Study, Problem based Learning, Teamwork/ Cooperative Learning, Field Visits/Training, Presentation/Seminar, Case Studies, Exercises and Homeworks	Oral Exams, Presentations Technical/Practical Report

15. Project Assessment:

Each project will be assessed by a committee of three members as follows:

Item	Marks Distribution
Project supervisor	60%
Internal examiner: a member of the department staff.	20%
External examiner: a qualified external examiner (either from other departments of the faculty or from another university)	20%
Total	**100%**

16. Training Course Assessment:

The training course will be assessed through:

Item	Assessment	Mark
Field Training	Weekly Report from the student	2 marks per report (24 marks)
	Training partner reports	20 marks
	Final report from the student	16 marks
	Final Presentation from the students	40 marks
Total		**100%**

17. Intended Learning Outcomes Mapping:

See below Annexes.

Annex- 13, Alignment of Program PILOs with Council of Accreditation and Standards
Annex- 14, Survey of Credit Hours of Similar Programs

18. Program Structure:

No	Requirements		No. of Courses	Credit Hours	Rational Weight %
1	University Requirements	Compulsory	٧	١٤	١٠.٤٤%
		Elective	0	0	
2	Faculty Requirements	Compulsory	12	36	٢٦,٨٦%
		Elective	0	0	
3	Department Requirements	Compulsory	6	18	١٢.٤٣%
		Elective	0	0	
4	Program Requirements	Compulsory	٢2	66	٤٩.٢٥%
		Elective	2	6	
5	Field Training	Compulsory	0	0	00.00%
		Elective	1	0	
	Total:		50	140	100.00%

* The Project Courses Credit Hours are already added to the total credit hours with the faculty requirements.

18.1. University Requirements

Annex- 16, Themes of Courses of Study and their Weightage

Annex- 17, Coding System

Annex- 18, Survey of Course Names per Academic Semesters of Similar Program

Annex- 19, Comparison of Program Courses and Similar Programs Courses

Annex- 20, Matrix of Mapping Program PILO's with Courses

16.7 Admission Requirements:

1. Admissions to the program shall be made as per the admission rules set by the Ministry of Higher Education and Scientific Research as well as IUTT admission guidelines.
2. General Secondary school certificate (Science Section) or any equivalent certificate with grade as specified in the admission rules made by Ministry of Higher Education and Scientific Research.
3. Pass the aptitude test and personal interview if any.
4. Any necessary requirement for specialization, decided by the Faculty.

16.8 Attendance and Graduation Requirements:

1. Student attendance should not be less than 75%.
2. Student will graduate after successfully passing all program requirements.
3. Total credit hours for the program are **131** credit hours**.**
4. Minimum score for any student to pass any credit hours course is 50% marks.

16.9 Grading System:

From 90% to 100% of total marks	Excellent
From 80% to less than 90%	Very Good
From 65% to less than 80%	Good
From 50% to less than 65%	Pass
Less than 50%	Poor/Fail

16.10 Facilities Required for Running the Program:

1. Sufficient Classrooms furnished with all necessary pieces and equipment.
2. Drawing halls.
3. Library and study room
4. Computer Labs.
5. Audio Studio.
6. Photography and Video Studio.
7. Academic and administrative staff offices.
8. Internet.

16.11 Program Assessment:

	Type of the Sample who Assess the program	Instruments used	Sample
1	**Graduates**	**Questionnaire**	20%
2	**Academic Staff**	**Interviews**	100%
3	**Employment agencies (views)**	**Questionnaires**	50%
4	**Final year students**	**Focus group discussions**	20%
5	**External Examiners**	**Interviews**	100%
6	**Others CAQA**	**Interviews/ Documents analysis**	100%

16.12 Program Quality Standards:

16.13 Internal and external training to satisfy program standards:

16.14 Program Policies:

Based on University Regulations

1.	**(Class Attendance):** A student should attend not less than 75 % of total hours of the subject; otherwise, he/she will not be able to take the exam and will be considered as exam failure. If the student is absent due to illness, he/she should bring a proof statement from university Clinic. If the absent is more than 25% of a course total contact hour, student will be required to retake the entire course again.
2.	**(Tardy) :** For late in attending the class, the student will be initially notified. If he repeated lateness in attending class, he/she will be considered as absent.
3.	**(Exam Attendance/Punctuality) :** A student should attend the exam on time. He/she is permitted to attend an exam half one hour from exam beginning, after that he/she will not be permitted to take the exam and he/she will be considered as absent in exam.
4.	**(Assignments & Projects) :** Assignments and projects are given as per course specification; the student has to submit all the assignments for checking on time, mostly one week after given the assignment.
5.	**(Cheating) :** For cheating in exam, a student will be considered as fail. In case the cheating is repeated three times during his/her study the student will be disengaged from the Faculty.
6.	**(Plagiarism) :** Plagiarism is the attending of a student the exam of a course instead of another student. If the examination committee proofed a plagiarism of a student, he/she will be disengaged from the Faculty. The final disengagement of the student from the Faculty should be confirmed from the Student Council Affair of the university or according to the university roles.
7.	**(Other policies) :** - Mobile phones are not allowed to use during a class lecture. It must be closed; otherwise the student will be asked to leave the lecture room. - Mobile phones are not allowed in class during the examination. - Lecture notes and assignments might be given directly to students using soft or hard copy.

4. BS, Cyber security, School of computer science and mathematics, University of Central Missouri, USA
   https://www.ucmo.edu/college-of-health-science-and-technology/school-of-computer-science-and-mathematics/cybersecurity/
5. BSc, Cyber security, Department of Computer Science, Cosmats University, Pakistan
   http://ww3.comsats.edu.pk/cs/bscy.aspx
6. BSc, Cyber security, School of Science, Edith Cowan University, Australia
   https://www.ecu.edu.au/degrees/courses/bachelor-of-science-cyber-security
7. BSc(Hons.) Cyber security and digital forensics, Department of Cyber security, 21 UMAS, Yemen.

1- Vision of the Corresponding Departments and Suggested Vision:

#	The Department	Vision
1.	**Department of Computer Science**	Academic leadership and distinction in computing sciences contributing to the development of the knowledge society locally and regionally
2.	**Department of Information Systems**	-
3.	**School of Computing**	-
4.	**School of Computer Science and Mathematics**	-
5.	**Department of Computer Science**	To excel in the quality of education service, scientific research, and community service, in the field of cybersecurity and networks in accordance with quality standards and academic accreditation.
6.	**School of Science**	Increase student participation rates in STEM and foster their aspiration for Higher Education.
7.	**Department of Cyber security, 21 UMAS**	To provide innovative cybersecurity and digital forensics solutions with academic excellence, national responsibility, and faith-driven values.

2- Mapping of Department Vision to the University and Faculty Visions:

University Vision	Faculty of Medical Technology Vision	Department of Cyber security Vision
A Contemporary University with National Responsibility and Faith Identity.	A contemporary medical technology faculty with sober academic dimensions, national responsibility and faith identity.	To provide innovative cybersecurity and digital forensics solutions with academic excellence, national responsibility, and faith-driven values.

3- Mission of the Corresponding Departments and Suggested Mission:

#	The Department	Mission
1.	**Department of Computer Science**	To qualify highly skilled graduates who can compete and produce creative work in the field of computing sciences. That is achieved through providing a distinguishable learning system that complies with international standards and establishing an environment that encourages learning and creativity, as well as the best utilization of technology and active local and regional partnerships in order to contribute to the development of the knowledge society and achievement of national goals.
2.	**Department of Information Systems**	The program is primarily aimed to fill the gap in the critical field of cybersecurity and information security at local and global level. It contributes directly to The Kingdom of Bahrain Economic Development Board by promoting Bahrain's growing Cybersecurity's hub potential.
3.	**School of Computing**	-
4.	**School of Computer Science and Mathematics**	-

Annex- 1, Survey on the Strategic Orientations of the Department and Similar Departments, and their Alignment to the Strategic Orientations of the Universi and Faculty:

#	The Department	Mission
5.	**Department of Computer Science**	Providing a distinguished service in education and scientific research in the field of cybersecurity and networks, in accordance with the standards of academic accreditation, in order to prepare graduates with high scientific and professional competitive capabilities to cover the needs of the labor market and community service.
6.	**Department of Science**	advance students' knowledge of, and aspirations for careers in the science field.
7.	**Department of Cyber security, 21 UMAS**	To lead in cybersecurity and digital forensics by providing cutting-edge education, fostering research, and offering innovative solutions that meet the evolving needs of the Yemeni digital sector and the region.

4- Mapping of Department Mission to the University and Faculty Missions:

University Mission	Faculty of Medical Technology Mission	Department of Cyber security Mission
Leadership of transformation in managing and providing the health care with all partners via having the distinction standard in education and applied and medical researches that meet the needs of Yemeni people and regional influence.	Participation in leading the medical technological transformation to provide technically and informatically integrated health care, through the provision of scientific educational programs with solid and contemporary academic dimensions, and research services of a creative nature that meet the needs of the Yemeni health sector, its specificity and regional needs.	To lead in cybersecurity and digital forensics by providing cutting-edge education, fostering research, and offering innovative solutions that meet the evolving needs of the Yemeni digital sector and the region.

5- Objectives (Educational) of the Corresponding Departments and Suggested Objectives:

#	The Department	Objectives
1.	**Department of Computer Science**	• Continuous excellence in teaching and learning improvement • Develop and improve highly qualified teaching faculty and administrative staff • Develop competitive capabilities of the graduates • Encourage high quality scientific research • Apply the standards of quality assurance and acquire academic accreditation • Participate in community service and create partnerships locally and internationally
2.	**Department of Information System**	• Pursue a successful career in the fields of Cybersecurity in the public or private sectors or embark on an entrepreneurial path. • Add valued contributions to the society through responsible and ethical practice within the Cybersecurity profession. • Engage in life-long learning, professional development, graduate-level studies, adapt to the changes in the work environment, and attain leadership competencies.
3.	**School of Computing**	-
4.	**School of Computer Science and Mathematics**	▪ The School will promote education and research in cybersecurity and information assurance at UCM. ▪ The School will foster sound internal practices for security of computer networks at UCM. ▪ The School will promote collaboration with companies in the region.

Annex- 1, Survey on the Strategic Orientations of the Department and Similar Departments, and their Alignment to the Strategic Orientations of the Universi and Faculty:

#	The Department	Objectives
		▪ The School will promote collaboration with local and state government to provide cybersecurity and information assurance solutions
5.	**Department of Computer Science**	• Providing students with knowledge and skills to qualify them to compete in the labor market. • Enable students to use scientific methods and modern knowledge to solve real problems. • Foster teamwork, co-working opportunities, leadership, excellence, productivity and self-education.
6.	**School of Science**	-
7.	**Department of Cyber security, 21 UMAS**	1- Implementing quality standards in cybersecurity and digital forensics education, research, and community service. 2- Adopting student-centered learning, nurturing national responsibility, and enhancing students' skills post-graduation. 3- Attracting skilled professionals to reduce brain drain, fostering innovation and national development in the cybersecurity sector. 4- Continuously developing state-of-the-art academic and research infrastructure, ensuring real-world impact locally and regionally. 5- Strengthening the department's role as a key partner in local, regional, and international collaborations, offering cutting-edge cybersecurity and digital forensics education and research to meet market needs.

6- Mapping of Department Objectives to the University and Faculty Objectives:

Annex- 1, Survey on the Strategic Orientations of the Department and Similar Departments, and their Alignment to the Strategic Orientations of the Universi and Faculty:

University Objectives	Faculty of Medical Technology Objectives	Department of Cyber security Objectives
1- Ensuring the application of quality standards and having the distinction standards in medical and applied sciences, scientific research and community service. 2- Adopting student-centered learning, the partnership with them for life, consolidating the principles of national responsibility and faith identity, looking after them and developing their capabilities after graduation and during work. 3- Attracting and Eemploying scientists, cadres and talents to gain minds and put an end for the "brain drain" in a way that promotes and ensures the availability of thinkers, businessmen and good citizens. 4- Developing the distinguished academic infrastructure continuously and establishing modern research and service centers with high efficiency that can give a real effect locally and regionally. 5- Enhancing the university status as a preferred partner for local, regional and international partnership through implementing creative styles of education, exchanging researches and knowledge, and providing real and effective outcomes for developing professional practices to benefit from them locally and regionally.	1- Applying Total Quality Standards, and setting an academic excellence in medical technology sciences, scientific research and community service. 2- Centrality of students in the educational process, their participation, as well as, looking after them, establishing originality values and developing their potential after graduation and during work. 3- Attracting highly scholars cadres, and highly specialized talents in medical technology thus enhances and ensures that there are thinkers, businessmen, and good citizens. 4- Harnessing all available capabilities of infrastructure, academic, training centers, as well as, modern researches and service centers and available educational laboratories to achieve the desired goals of the college of medical technology in order to meet the needs of the labor market. 5- Enhance the university and college position as an ideal partner for the academic and health sectors at the local, regional and international levels by providing educational programs for developing professional practices and useful health-care services.	1- Implementing quality standards in cybersecurity and digital forensics education, research, and community service. 2- Adopting student-centered learning, nurturing national responsibility, and enhancing students' skills post-graduation. 3- Attracting skilled professionals to reduce brain drain, fostering innovation and national development in the cybersecurity sector. 4- Continuously developing state-of-the-art academic and research infrastructure, ensuring real-world impact locally and regionally. 5- Strengthening the department's role as a key partner in local, regional, and international collaborations, offering cutting-edge cybersecurity and digital forensics education and research to meet market needs.

Program Mission	Preparing cybersecurity professionals in both academic and industrial settings capable of leading, designing and developing various projects in different areas of cybersecurity, by providing a distinguished and	Capablilty of evaluating an organization from end to end by assessing its security needs, then designing security and governance architecture that will satisfy its Cyber Security requirements.		• Provide up-to-date undergraduate and graduate programs which enable students to enrich their knowledge and prepare them for careers in computing profession and/or	• Provide high-quality education in cyber security that prepares students for professional careers and lifelong learning in network security, digital forensics, information security, information	To meet the changing landscape of secure computing, which involves not only computers, but also network enabled devices such as smartphones, tablet devices, and Internet of Things (IoT).	To equip students with the knowledge and skills necessary to drive digital security advancements, supporting digital transformation through applied education and research that aligns

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
	high-quality program that focuses on integrating scientific theories and practical training to develop programs and applications			advanced graduate study; • Provide computer-related service courses to enhance student learning and fulfill the needs of the 21st century workforce; • Support and encourage the professional development of its faculty in areas of service, leadership roles in professional organizations, scholarly research, and grant writing.	assurance, secure software design and development, and vulnerability assessment and reverse engineering.		with the technological needs of Yemen and the region.
Program Objectives (PObj)	**POE1.** Students will acquire the knowledge, skills and attitude	**POE1.** Pursue a successful career in the fields of Cybersecurity in the	**POE1.** To give students with a wide variety of qualifications an	**POE1.** Have established themselves in successful cybersecurity-focused	**POE1. Academic Education:** Completion of an		**POE1.** Achieving academic excellence in

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
	necessary for the analysis of Cybersecurity problems and the subsequent design of appropriate solutions using best practices that will enable them to be distinguished and innovative and to acquire top positions in the job market. **POE2.** Students will apply cutting-edge solutions within a professional, legal and ethical framework and will operate effectively in multidisciplinary teams. **POE3.** Students will practice continued, self-learning to keep their knowledge and skills up to date and to remain abreast of	public or private sectors or embark on an entrepreneurial path. **POE2.** Add valued contributions to the society through responsible and ethical practice within the Cybersecurity profession. **POE3.** Engage in life-long learning, professional development, graduate-level studies, adapt to the changes in the work environment, and attain leadership competencies.	opportunity to realise their potential. **POE2.** To enrich the curriculum content and teaching quality through the professional and/or research expertise of staff and through links to external organisations. **POE3.** To encourage and support students while they develop and apply subjectspecific and generic skills that will facilitate life-long learning and continuing professional development. **POE4.** To produce graduates who can make a significant contribution to their chosen profession.	careers and/or pursuing advanced degrees. **POE2.** Continue to update their professional knowledge and skills to adapt to innovation and change to meet the needs of industry and/or academia. **POE3.** Contribute to the greater good of their communities through professional involvement and service.	accredited program of study designed to prepare graduates as computing professionals **POE2. Knowledge for Solving Computing Problems:** Apply knowledge of computing fundamentals, computing specialization, mathematics & statistics, basic and social sciences, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models. **POE3. Problem Analysis**: Identify,		cybersecurity and digital forensics through quality standards, research, and service. **POE2.** Engaging students in the learning process, fostering national responsibility, and supporting their professional growth. **POE3.** Attracting highly qualified faculty and experts in cybersecurity to enhance the program and meet national and regional needs. **POE4.** Leveraging modern infrastructure,

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
	the latest developments in cybersecurity. **POE4.** Students will demonstrate readiness to commence postgraduate studies in cybersecurity and related fields.		**POE5.** To provide an understanding of common algorithms, design patterns and computational models, and to apply these techniques to create high quality computer software and systems. **POE6.** To produce graduates who are technical experts, but who also have an awareness of the business, social, legal and ethical contexts of IT. **POE7.** To encourage exploration and enthusiasm for both the subject of computing and to encourage creativity		formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental and advanced principles o computer sciences, cyber security, mathematics & statistics, basic and social sciences. **POE4. Design/ Development of Solutions:** Design and evaluate solutions for complex computing problems, and design and evaluate cyber security systems, components, or processes that meet specified needs with appropriate		research centers, and training facilities to provide practical and relevant cybersecurity education. **POE5.** Strengthening the program's role in advancing professional practices and offering impactful solutions to the cybersecurity challenges faced locally and regionally

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
					consideration for public health and safety, cultural, societal, and environmental considerations. **POE5. Modern Tool Usage:** Create, select, adapt and apply appropriate computing and cyber security based techniques, resources, and tools to complex computing activities, with an understanding of the limitations. **POE6. Individual and Team Work:** Function effectively as an individual and as a member or leader in diverse teams and in multi-disciplinary settings.		

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
					POE7. Communicatio n: Communicate effectively with the computing community and with society at large about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations, and give and understand clear instructions. **POE8. Computing Professionalism and Society:** Understand and assess societal, health, safety, legal, and cultural issues within local and global contexts, , and the consequential responsibilities		

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
					relevant to professional computing practices **POE9. Ethics:** Understand and commit to professional ethics, responsibilities, and norms of professional **POE10. Life-long Learning**: Recognize the need, and have the ability, to engage in independent learning for continual development as a computing profession.		
Program ILOs	**1.** Ability to analyze complex computational problems and to apply principles of computing and related technologies to specify solutions.	**1.** Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. **2.** Design, implement, and	1. **Knowledge and understanding:** **1.1.** An ability to recognise the fundamental concepts, principles and theories relating to computing and computer applications as appropriate to the	**1.** Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. **2.** Design, implement, and evaluate a	.	**1.** Apply comprehensive knowledge of concepts, principles and techniques in the cyber security discipline to both theoretical as well as practical situations.	**Knowledge and understanding** **A1.** Demonstrate an in-depth knowledge of terminology, concepts, methods, principles and

	discipline. **6.** Ability to apply principles and practices of security on the environment, device, software and human aspects related to solutions. **7.** Ability to analyze and evaluate systems reliability in risk and threat environments.	to the program's discipline. **6.** Apply security principles and practices to maintain operations in the presence of risks and threats.	criteria and specifications appropriate to specific problems, and plan strategies for their solution. **2.3.** The ability to analyse the extent to which a computer-based system meets the criteria defined for its current use and future development. **2.4.** The capability to deploy appropriate theory, practices and tools for the specification, design, implementation and evaluation of computer-based systems. **2.5.** An awareness of the risks, safety issues, legislation and regulatory requirements when designing/managing an information system.	appropriate to the program's discipline. **6.** Apply security principles and practices to maintain operations in the presence of risks and threats.		presenting documented results. **6.** Incorporate an awareness of cross-cultural issues and demonstrate cultural and indigenous competence in professional practice in the cyber security area. **7.** Work collaboratively in the application of knowledge and skills to identify issues and make decisions relevant to cyber security. **8.** Demonstrate creativity and initiative to generate ideas for planning and implementing independent projects in the cyber security	techniques to achieve authentication, authorization, access control, and data integrity. **Cognitive and intellectual skills:** **B1.** Analyze the basic concepts, principles, analytical and mathematical models, algorithms and software tools in the context of cybersecurity. **B2.** Select an appropriate range of security protocols, tools, and techniques for providing confidentiality, data protection, data integrity, authentication, non-

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
			3. Key and transferable skills: **3.1.** Communicate effectively in writing and verbally **3.2.** Manage resources and time **3.3.** Critique and self-evaluate **3.4.** Work both autonomously and as part of a team when required **3.5.** Discuss and debate problems and issues to learn effectively for the purpose of continuing professional development. **3.6.** Work as a member of a development team **3.7.** Use industry standard tools for collaboration **4. Employment related skills:** **4.1.** Initiative and personal responsibility			discipline.	repudiation, and obfuscation. **B3.** Select an appropriate range of tools and technologies to plan, organize, and implement a cyber security project with due considering human factors, user and organisational requirements. **B4.** Evaluate a computing-based solution to meet a given set of computing requirements in the context of cybersecurity discipline. **Practical skills:** **C1.** Apply

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
			4.2. The ability to work both autonomously and within a team **4.3.** Effective communication and debating skills **4.4.** The ability to make decisions based on incomplete information **4.5.** The educational skills required for deep learning **5. Practical skills:** **5.1.** Specify, design and construct computer-based systems. **5.2.** Effectively deploy the tools used for the construction and documentation of computer applications. **5.3.** Recognise risks or safety aspects that may be involved in the operation of computing and information				mathematical foundations, algorithmic principles, cryptography, design and development principles, and computing theory in the modeling and design of security solutions for software or system architecture. **C2.** Design, implement, and test a computing-based solution to meet a given set of computing requirements in the context of cyber security. **C3.** Deploy effectively computing tools and

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
			systems. **5.4.** Prepare technical reports. **5.5.** Give technical presentations. **5.6.** Use scientific literature effectively. **5.7.** Design and construct complex, robust and secure multi-tier computer systems suitable for a variety of platforms and devices. **6. Accreditation specific learning outcomes in Computing:** **6.1.** Knowledge and understanding of commercial and economic context of development **6.2.** Knowledge and understanding of management techniques required to achieve objectives in a computing context				techniques used for the construction and documentation of secure computer applications of varying complexity. **C4.** Apply principles, processes, tools and techniques used in mitigating security threats and responding to security incidents. **General/ Transferrable Skills:** **D1.** Function effectively individually, as a member, or leader of a team engaged in activities appropriate to the cybersecurity program's discipline

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
			6.3. Knowledge and understanding of information security issues in relation to the design, development and use of information systems **6.4.** Knowledge and understanding of scientific and engineering principles **6.5.** Knowledge and understanding of mathematical principles **6.6.** Knowledge and understanding of computational modelling **6.7.** Use appropriate theoretical and practical processes to specify, deploy, verify and maintain computer-based systems **6.8.** Define problems, manage design process and evaluate outcomes				to accomplish a common goal. **D2.** Commit to professional ethics, responsibilities, and norms of professional computing practices. **D3.** Communicate effectively in writing and verbally computing and cybersecurity concepts and implications to wide range of audiences. **D4.** Engage in continuing professional development and lifelong learning as a computing professional.

University	Princess Sumaya University for Technology	University of Bahrain	Plymouth University	Unversity of central Missouri	Cosmats University	Edith Cowan University	21 UMAS
			6.9. Apply principles of appropriate supporting engineering and scientific disciplines				

2- Mapping of Program Mission with the University, Faculty and Department Missions:

University Mission	Faculty of Medical Technology Mission	Department of CyberSecurity Mission	Cyber security and digital forensics Program Mission
Leadership of transformation in managing and providing the health care with all partners via having the distinction standard in education and applied and medical researches that meet the needs of Yemeni people and regional influence.	Participation in leading the medical technological transformation to provide technically and informatically integrated health care, through the provision of scientific educational programs with solid and contemporary academic dimensions, and research services of a creative nature that meet the needs of the Yemeni health sector, its specificity and regional needs.	To lead in cybersecurity and digital forensics by providing cutting-edge education, fostering research, and offering innovative solutions that meet the evolving needs of the Yemeni digital sector and the region.	To equip students with the knowledge and skills necessary to drive digital security advancements, supporting digital transformation through applied education and research that aligns with the technological needs of Yemen and the region.

3- Mapping of Program Objectives with the University, Faculty and Department Objectives:

University Objectives	Faculty of Medical Technology Objectives	Department of CyberSecurity Objectives	Cyber security and digital forensics Program Objectives
1- Ensuring the application of quality standards and having the distinction standards in medical and applied sciences, scientific research and community service. 2- Adopting student-centered learning, the partnership with them for life, consolidating the principles of national responsibility and faith identity, looking after them and developing their capabilities after graduation and during work. 3- Attracting and Eemploying scientists, cadres and talents to gain minds and put an end for the "brain drain" in a way that promotes and ensures the availability of thinkers, businessmen and good citizens. 4- Developing the distinguished academic	1- Applying Total Quality Standards, and setting an academic excellence in medical technology sciences, scientific research and community service. 2- Centrality of students in the educational process, their participation, as well as, looking after them, establishing originality values and developing their potential after graduation and during work. 3- Attracting highly scholars cadres, and highly specialized talents in medical technology thus enhances and ensures that there are thinkers, businessmen, and good citizens. 4- Harnessing all available capabilities of infrastructure, academic, training centers,	1- Implementing quality standards in cybersecurity and digital forensics education, research, and community service. 2- Adopting student-centered learning, nurturing national responsibility, and enhancing students' skills post-graduation. 3- Attracting skilled professionals to reduce brain drain, fostering innovation and national development in the cybersecurity sector. 4- Continuously developing state-of-the-art academic and research infrastructure, ensuring real-world impact locally and regionally.	1- Achieving academic excellence in cybersecurity and digital forensics through quality standards, research, and service. 2- Engaging students in the learning process, fostering national responsibility, and supporting their professional growth. 3- Attracting highly qualified faculty and experts in cybersecurity to enhance the program and meet national and regional needs.

University Objectives	Faculty of Medical Technology Objectives	Department of CyberSecurity Objectives	Cyber security and digital forensics Program Objectives
infrastructure continuously and establishing modern research and service centers with high efficiency that can give a real effect locally and regionally. 5- Enhancing the university status as a preferred partner for local, regional and international partnership through implementing creative styles of education, exchanging researches and knowledge, and providing real and effective outcomes for developing professional practices to benefit from them locally and regionally.	as well as, modern researches and service centers and available educational laboratories to achieve the desired goals of the college of medical technology in order to meet the needs of the labor market. **5-** Enhance the university and college position as an ideal partner for the academic and health sectors at the local, regional and international levels by providing educational programs for developing professional practices and useful health-care services.	**5-** Strengthening the department's role as a key partner in local, regional, and international collaborations, offering cutting-edge cybersecurity and digital forensics education and research to meet market needs.	4- Leveraging modern infrastructure, research centers, and training facilities to provide practical and relevant cybersecurity education. 5- Strengthening the program's role in advancing professional practices and offering impactful solutions to the cybersecurity challenges faced locally and regionally.

1. Proposed Program Criteria for Associate Cybersecurity and Similarly Named Programs

These program criteria apply to computing programs using cybersecurity, cyber operations, computer security, information assurance, information security, computer forensics, or similar terms in their titles.

Note. Criterion 3 and 5 listed below replace, not extend, Criterion 3 and 5 stated in the CAC General Criteria.

1- Criterion 3. Student Outcomes

The program must have documented and publicly stated student outcomes that include (1) through (6) below and any outcomes required by applicable Program Criteria. The program may define additional outcomes.

Graduates of the program will have an ability to:

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Apply security principles and practices to maintain operations in the presence of risks and threats.

2- Criterion 5. Curriculum

The curriculum requirements are in addition to the General Criteria curriculum requirements and specify topics, but do not prescribe specific courses. These requirements are:

The curriculum requirements specify topics, but do not prescribe specific courses.

These requirements are:

A. At least 45 semester credit hours (or equivalent) of computing and cybersecurity course work. The course work must include:

1 Application of techniques, skills, and tools necessary for cybersecurity practice.

2 Application of the crosscutting concepts of confidentiality, integrity, availability, risk, adversarial thinking, and systems thinking.

3 Fundamental topics from each of the following:

- **a.** Data Security: protection of data at rest, during processing, and in transit.
- **b.** Software Security: development and use of software that reliably preserves the security properties of the protected information and systems.

c. Component Security: the security aspects of the design, procurement, testing, analysis, and maintenance of components integrated into larger systems.

d. Connection Security: security of the connections between components, both physical and logical.

e. System Security: security aspects of systems that use software and are composed of components and connections.

f. Human Security: the study of human behavior in the context of data protection, privacy, and threat mitigation.

g. Organizational Security: protecting organizations from cybersecurity threats and managing risk to support successful accomplishment of the organizations' missions.

h. Societal Security: aspects of cybersecurity that broadly impact society asa whole.

4 Advanced cybersecurity topics that build on crosscutting concepts and fundamental topics to provide depth.

B. At least 6 semester credit hours (or equivalent) of mathematics that must include discrete mathematics and statistics.

The program must ensure its students have the mathematical skills and an understanding of the scripting and programming concepts required for cybersecurity practice to meet its student outcomes and program educational objectives.

Program Intended Learning Outcomes (PILOs): Current Program: B.Sc (CyberSecurity and digital forensics Program Program at 21 UMAS)

A. Knowledge and Understanding:

Upon successful completion of the undergraduate B.Sc (CyberSecurity and digital forensics Program, the graduates will be able to:

A1. Demonstrate an in-depth knowledge of terminology, concepts, methods, principles and theories relaed to the field of cyber security..

A2. Demonstrate a profound knowledge of computing tools, techniques, and methods for solving the real world computing problems.

A3. Identify the user and organizational needs and issues involved in the management and security of digital information and computer technology, and the development and maintenance of secure information systems..

A4. Describe the concepts and techniques to achieve authentication, authorization, access control, and data integrity.

B. Cognitive/ Intellectual Skills:

Upon successful completion of the undergraduate B.Sc (CyberSecurity and digital forensics Program, the graduates will be able to:

B1. Analyze the basic concepts, principles, analytical and mathematical models, algorithms and software tools in the context of cybersecurity.

B2. Select an appropriate range of security protocols, tools, and techniques for providing confidentiality, data protection, data integrity, authentication, non-repudiation, and obfuscation.

B3. Select an appropriate range of tools and technologies to plan, organize, and implement a cyber security project considering human factors, user and organisational requirements.

B4. Evaluate a computing-based solution to meet a given set of computing requirements in the context of cybersecurity discipline.

C. Practical and Professional Skills:

Upon successful completion of the undergraduate B.Sc (CyberSecurity and digital forensics Program, the graduates will be able to:

C1. Apply mathematical foundations, algorithmic principles, cryptography, design and development principles, and computing theory in the modeling and design of security solutions for software or system architecture.

C2. Design, implement, and test a computing-based solution to meet a given set of computing requirements in the context of cyber security

C3. Deploy effectively computing tools and techniques used for the construction and documentation of secure computer applications of varying complexity.Apply current algorithms, methods, and models to develop solutions for real-world problems related to cyber security.

C5. Apply principles, processes, tools and techniques used in mitigating security threats and responding to security incidents**.**

D. General and Transferable Skills:

Upon successful completion of the undergraduate B.Sc (CyberSecurity and digital forensics Program, the graduates will be able to:

D1. Function effectively individually, as a member, or leader of a team engaged in activities appropriate to the cybersecurity program's discipline to accomplish a common goal.

D2. Commit to professional ethics, responsibilities, and norms of professional computing practices.

D3. Communicate effectively in writing and verbally computing and cybersecurity concepts and implications to wide range of audiences.

D4. Engage in continuing professional development and lifelong learning as a computing professional.

Annex- 21, CVs for the Preparation Committee

Attached separately.
