Program Specification

1- Program Identification and General Information:

Program Identification and General Information:		
1	Program title:	Master's degree in Medical Hematology
2	Department responsible for the program:	Department of Hematology
3	Degree offered	Master of Medical Hematology
4	The Institute responsible for granting the degree:	21 September University of Medical & Applied Sciences
5	Study system:	Single
6	Study language of the program:	English
7	Entry requirements:	Bachelor's degree in Laboratory Medicine or other equal degrees
8	Departments participating in the program:	Department of Hematology Faculty of Laboratory Medicine
9	Starting year of the program:	2022-2023
10	Study methods in the program:	Lectures, Seminars, Lab Training, Discussion, Presentations, Self-learning Case study
11	Location of delivery:	21 September University of Medical & Applied Sciences, Faculty of Laboratory Medicine, Department of Hematology
12	The program resources:	21 September University of Medical & Applied Sciences
13	Minimum grade requirements:	As per regulations of the Ministry of Higher education and Scientific Research
16	Other admission requirements:	According to the University rules and regulations
14	Date of current development of the program:	January 2023
15	Prepared by:	- Prof. Dr. Mojahed Ali Measar - Prof. Dr. Khaled A. Al-Moyed - Associate Prof. Dr. Ebtesam Al-Zabedi - Assistant Prof. Dr. Gamil Taher Abdul-Mughni - Assistant Prof. Dr. Nawal Alhenhena - Assistant Prof. Dr. Boshra Al-absi
16	Program coordinator:	Assistant Prof. Dr. Gamil Taher Abdul-Mughni

2) Program Overview:

The Master program provides students an advanced background in Medical Hematology and the techniques used in hematology research. The average amount of time to completion is two years and half. The Main Areas of Research are **Medical Hematology**.

3-University Vision, Mission, and Objectives:

University vision 2025:

A contemporary university with national responsibility and a faith identity

University mission:

Leading the transformation in the management and delivery of health care with all partners by setting a standard of excellence in education and medical and applied research in a way that meets the needs of Yemeni society, its privacy and regional influence.

University objective:

1- Ensuring the application of quality standards and setting standards of excellence in medical and applied sciences, scientific research and community service.

2. The centrality of the student in the educational process, the partnership with them for life, the consolidation of the principles of national responsibility and faith identity, their care and the development of their capabilities after graduation and during work.

3. Attracting, employing and retaining scholars, cadres and highly specialized talents to gain minds and reverse the trend of “brain drain” in a way that enhances and ensures the creation of thinkers, businessmen and good citizens.

4. Continuous development of the distinguished academic infrastructure and the establishment of modern research and service centers with high efficiency and capable of making a real impact locally and regionally.

5. Enhancing the university's position as a preferred partner for local, regional and international partnership through implementing innovative models of education, exchanging research and knowledge and providing real and effective outcomes for developing professional practices to benefit from them locally and regionally

<p><i>Mission, Objective, and Learning Outcomes of the master program</i></p>
<p>I. Mission:</p> <p>To prepare highly qualified graduate skilled in the Medical Hematology through advanced leaning, practices and conducting scientific research.</p>
<p>II. General objectives of the program:</p> <p>1- Produce health science professionals and in-depth medical hematology knowledge of blood science and its disorders.</p> <p>2- Provide our candidate with the ability to apply different techniques in the field of medical hematology and blood transfusion.</p> <p>3- Provide opportunities to gain research capacity and publish scientific relevant studies.</p> <p>4- Promote community partners and stakeholders for program development, evaluation and improvement and active participation in professional societies.</p>
<p>III. Graduate Attributes of the program</p> <p><i>Upon successful completion of the program in Master of Medical Hematology, the graduates will be able to:</i></p> <p>1. provide an advanced knowledge in the fields of Medical Hematology and blood transfusion.</p> <p>2. provide independent critical and analytical thinking, both within their field of study, and beyond for the use of their knowledge for service to others.</p> <p>3. suggest possible solutions to ethical dilemmas that occur in their work and field of study and understand the importance of professional ethics in all aspects of scientific communication and laboratory work.</p> <p>4. demonstrate competence in the laboratory, including application of the scientific method and appropriate use of basic and state of the art laboratory tools and techniques.</p> <p>5. demonstrate written and oral skills necessary for communication of research, knowledge, and ideas to scientists and non-scientists alike.</p>

3. Intended Learning Outcomes from the program:	
A. Knowledge and understanding:	
<i>At the end of the course the student should be able to</i>	
a1	Understand the presentation, complications, diagnosis and management of different types of anemia, acute and chronic leukemias, pathophysiology and classification of myeloproliferative disorders, congenital and acquired coagulation and platelet disorders.
a2	List the key considerations and principles in the planning and design of a study on the basis of statistical methods.
a3	Understand of blood and its production from a molecular/genetic perspective.
a4	Explain the use of blood products, the principles of blood transfusion and the complications of long-term transfusion.
B. Intellectual Skills:	
<i>At the end of the course the student should be able to</i>	
b1	Interpret and explain results simply and effectively to clinicians and patients
b2	Illustrate an investigatory and analytic thinking approach (problem solving) to common clinical situations related to medical hematology.
b3	Categorize health risk factors associated with working in a research diagnostic laboratory
b4	Formulate management plans and alternative decisions in different situations in the field of the medical hematology.
C. Professional and Practical Skills:	
<i>At the end of the course the student should be able to</i>	
c1	Evaluate the peripheral blood and bone marrow aspirate smears.
c2	Perform all aspects of testing within hematology laboratory and blood bank.
c3	Interpret, verify and validate results and report findings to the requesting clinician.
D. General and Transferable outcomes:	
<i>At the end of the course the student should be able to</i>	
d1	Communicate effectively through oral presentations, computer processing and presentations, and written reports.
d2	Respect the role of staff and co-staff members regardless of degree or occupation.
d3	Write scientific article according to the basics of scientific research

Program Standards & Benchmarks
Academic Standards:
-NARS (National Academic References Standard) for medical education in Yemen
-Academic Standards Curriculum Criteria of Accreditation Board
-Unified Regulations for Student Affairs, Ministry of Higher Education and Scientific Research
Benchmarks
1-Faculty of medicine and health Sciences, Sana'a university, Yemen
2- Jordan University of Science and Technology (JUST), Jordan https://www.just.edu.jo/FacultiesandDepartments/FacultyofGraduateStudies/Documents/Master%20Degree%20in%20Hematology%20and%20Blood%20Banking.pdf
3- Arab American University, Palestine https://www.aaup.edu/ar/Academics/Graduate-Studies/Faculty-Graduate-Studies/Health-Sciences-Department/Master-Immunohematology/Thesis-Track-Curriculum
4-UNIVERSITY OF UTAH HEALTH https://medicine.utah.edu/pathology/medical-laboratory-science/ms/curriculum

Teaching and Learning Strategies:
<ul style="list-style-type: none"> • Lectures • Seminars • Lab experiments • Training • Discussion • Presentations • Self-learning • Case study

Teaching strategy:	
Teaching Strategy	Description of how it will be used
Lectures	It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups or in sessions, which consist of more than one group gathered in one classroom.
Seminars	These are mainly used with small groups of students in which they find better chances for discussing and negotiating the different concerns of their studies.
Lab experiments	Students doing practices in medical labs individually or in small groups.
Training	This is a practical kind of course where the students are required to plan and execute some field visits to hospitals, corporations or institutions where the process of clinical diagnosis is essential.
Discussion	This is done by allowing the students to ask questions during the lecture and respond to them by the lecturer or other students for the purpose of establishing and clarify the subject of the lecture strongly and increase the concentration and absorption of the student and the attention and not to enter the boredom.
Presentations	Helps the students to be more confident with themselves and make them to show the others what knowledge they have acquired. It can be followed in many types of courses and tasks.
Self-learning	Self-learning is the process by which learners teach themselves using any materials or resources to achieve clear goals without the direct help of the teacher
Case study	Case studies are defined as the scientific documentation of a single clinical observation which is so important study design in advancing medical scientific knowledge especially of rare disease.
Office Hours	Office hours are hours determined by the faculty member (professor of the course) to which the student studies. The hours allocated by the professor to meet with his students to help them and answer their queries in the event of any questions they may not be enough time for the lecture to answer it.

Assessment Methods:
<ul style="list-style-type: none"> • Written examinations • Oral exams • Technical or practical reports /Presentations • Assignments including problem-solving exercises • Individual and group project work • Quizzes • Homework

Assessment Strategies:	
Assessment Strategy	Its description (in which course it will be used and in which rate)
Written examinations	Mid-term test is conducted between 6th to 8th Class and final exam is conducted at the end of each course.
Oral exams	For selected courses
Technical or practical reports /Presentations	As indicated in the course specification
Assignments including problem-solving exercises	The entire assignments including problem-solving exercises of coursework activities during the teaching period of each course. (Which includes group and individual work, tests and presentations, etc.)
Individual and group project work	As indicated in the course specification
Quizzes	For all courses except for project
Homework	For all courses except for project

1. Alignment of Program Intended Learning Outcomes (PILOs) to Teaching Strategies and Assessment Methods:		
PILOs	Teaching Strategy	Assessment Methods
Knowledge and Understanding A1, A2, A3, A4, A5	Lectures, Interactive class discussions, Tutorials.	Written exams, assignment work, quizzes, submission of reports.
Intellectual Skills B1, B2, B3, B4, B5	Lectures, Tutorial, Interactive class discussions, and group work, presentation.	Written exams, Project, Case studies and assignment work.
Professional & practical skills C1, C2, C3	Short lectures, case study, Laboratory experiments, Project, and group work, Field training.	Written exams, quizzes, Practical exam assignment and report submission.
General & Transferable Skills D1, D2, D3	Group work, Self-study, Interactive class discussions, Tutorials, Seminar/ project/presentation, Laboratory experiments, Project.	Project presentation, Laboratory exam, Report/Project

1. Project Assessment:	
Each project will be assessed by a committee of three members as follows:	
Item	Marks Distribution
Project supervisor	60%
Internal examiner: a member of the department staff.	20%
External examiner: a qualified external examiner (either from other departments of the faculty or from another university)	20%
Total	100%

Program Structure and Contents

Study System	
I- Duration of program	2 – 3 years, maximum 4 years divided into courses, training and thesis
II- Structure of the program:	Total contact number of credit hours 33
First year	Program-related essential courses and Students ILOs
Thesis	MSc thesis subject should be officially registered within 3 months after the second semester of the program, discussion and acceptance of the thesis could be set after 12 months from MSc thesis registering date.
